

Conflict minerals sourcing policy

The so called “Conflict minerals” (also called 3TG) include cassiterite (tin), columbitetantalite (tantalum), wolframite (tungsten) and gold sourced in the Democratic Republic of Congo (DRC) and neighboring countries. The Conflict minerals are mined in rough conditions and human rights are abused. Armed groups fight for control of the mines and revenues fund further violence.

Keymet Ab confirm that we source only DRC conflict free minerals, in the case that we source the materials in question.

We will also not accept that any of our supplier’s source conflict materials, we will immediately stop sourcing from suppliers if we get information that they source conflict materials.
